EDUCATION

University of Central Florida

Bachelor of Science, Computer Science

Magna Cum Laude, GPA: 3.9

Relevant Coursework: Data Structures and Algorithms, Matrix and Linear Algebra, Processes for Object-Oriented Software Development, Web Development, Mobile Development, Artificial Intelligence

Orlando, FL

May 2026

SKILLS

Languages: Python, TypeScript, JavaScript, Java, SQL, C#, HTML, CSS

Frameworks & Technologies: React, Next.js, FastAPI, PostgreSQL, Tailwind CSS, Claude API

Tools: Vercel, Render, Supabase, Unity, Jira

EXPERIENCE

HCA Healthcare – Pyscall Resident Scheduler (Senior Capstone)

September 2025 – May 2026

Project Manager/Frontend | Next.js, TypeScript, Tailwind

- Led a 6-person development team as project manager using Scrum methodology in creating a rotation scheduler for medical residents, replacing an inefficient manual email-based process.
- Replaced manual scheduling of ~96 monthly resident rotations with an automated scheduling workflow.
- Maintained and extended Pyscall, an existing app, for the industry sponsor at HCA Healthcare.
- Developed a resident preference submission workflow that allowed users to update requests before scheduling deadlines, reducing administrative overhead and improving schedule satisfaction.
- Built a reusable, controlled React calendar component that supported staged schedule editing, displaying errors, and manual administrator overrides; later adopted by a second development team.

PROJECTS

Cody Hunter E-Portfolio

March 2026

Developer | React, Tailwind CSS

- Designed and built a professional portfolio site from scratch for a prospective UF graduate student.
- Gathered client requirements and created a simple mockup to develop the site efficiently.
- Designed a reusable project data structure using JavaScript modules, allowing new portfolio entries to be added without modifying UI components.
- Maintained the site post-launch with content updates and additions.

Power Level

February 2026

Solo Developer | React, FastAPI, PostgreSQL, Claude API

- Expanded a personal command-line statistics tracker into a deployed full-stack application tracking 500+ individual games across 8 game types after repeatedly using AI to interpret its output.
- Created game data parsers to generate detailed statistics, including win rates, head-to-head matchup stats, team performance, and role-based breakdowns for each player, depending on game type.
- Integrated Claude API to analyze performance patterns across sessions and create personalized tier lists.
- Iteratively refined prompts by having Claude Sonnet evaluate Haiku-generated output for quality.
- Hosted with React frontend on Vercel, FastAPI backend on Render, and PostgreSQL database on Supabase.
- Added authentication via Supabase, including email verification, password reset, and nameable save files.

PONG

April 2025

Solo Developer | Unity, C#

- Developed and shipped a feature-complete Pong recreation in Unity using C#, deployed as a playable browser build on itch.io.
- Built an opponent AI using raycasts to predict ball trajectory and dynamically position the paddle.
- Implemented collision handling manually using colliders and directional logic scripts, without relying on Unity's built-in physics engine to ensure accuracy.
- Implemented scoring and match-reset logic from scratch.
- Included full controller support with a local multiplayer mode.
